

Call for Proposals

The 20th Open Grid Forum - OGF20

May 7-11, 2007

Manchester International Convention Centre, Manchester, UK

OGF20 is co-located with the EGEE User Forum, which will run from May 9-11. Most OGF community events will take place on May 7-9, with the overlap on the 9th allowing joint meetings between the OGF and EGEE communities.

OGF is comprised of a number of "communities of interest" who either are users of grids in their domain or who develop innovative approaches to encourage the further adoption of grids. The OGF20 Program seeks to build new and strengthen existing communities of interest in OGF including industry and e-Science.

The OGF20 Program will offer a series of 30-90 minute talks and panels emphasizing the applications and operations of grids in research and commercial contexts. It will also offer half and full-day workshops on the implementation and application of grid software. One track of the program will focus on explaining and discussing the opportunities for the successful deployment of grids in business; an outline of the sessions in this track is available at <URL here>.

While there are no formal publication requirements, all session organizers are required to submit materials (including slides) for inclusion on the OGF web pages prior to the event. Publications in the form of OGF Informational Documents, journal articles/special or equivalent are encouraged, especially for workshops.

The OGF workshop program will run co-located and in parallel with other OGF activities such as standards sessions. Wednesday May 9th will be run jointly with the EGEE User Forum and appropriate topics will be scheduled on this day. More information on the EGEE User Forum can be found at <http://cern.ch/egge-intranet/User-Forum/>.

Proposals are now being accepted for the OGF20 Program. Only proposals submitted online prior to 9th February will be considered. To submit a proposal, visit: <URL here> Acceptance notices will be sent approximately one week later. Presentation slides for some sessions, including Grids in business, will be required in advance.

Details (examples, abstracts and slides) of past successful OGF programs can be viewed at:
